Configuración de dokuwiki con acceso OAuth

1. Open Google Developer Console in your browser and log in into your Google Account. If you do not have Google Account yet, it is good time to create one.
2. Click **Create project...** (you may see the page like this http://snag.gy/MZaOh.jpg).
3. Fill new project form, give some name and project ID (see http://snag.gy/Ipmxr.jpg).
   - ⚠ Google may ask you to confirm you contact phone with SMS or callback. "Evil Corporation" define their own rules. It's up to you to decide :)
4. Open menu **APIs & auth** → **Credentials** (see http://snag.gy/ZuLfU.jpg)
5. Form "**Create Client ID**" will be opened. Fill it:
   - **Application type:** (required) choose "Web application";
   - **Authorized JavaScript Origins** enter your hostname (make sure http or https is the same for both settings). For example:

     ```
     http://www.your-domain.com
     ```

   - **Authorized Redirect URIs** enter these lines:

     ```
     http://www.your-domain.com/doku.php?id=start&do=login
     http://www.your-domain.com/start?do=login
     http://your-domain.com/doku.php?id=start&do=login
     http://your-domain.com/start?do=login
     http://www.your-domain.com/doku.php/start?do=login
     http://your-domain.com/doku.php/start?do=login
     ```

     Instead of "your-domain" put your actual hostname where DokuWiki is installed. ⚠
     Note: if your DokuWiki is accesed with HTTPS then enter the URI with **https**, not **http**.

6. Click "Create client ID" button.
7. Now you have page with all required information for plugin setup. You will need two values from here: **Client ID** and **Client secret**.
8. Open menu **APIs & auth** → **Consent screen**.
9. Fill "PRODUCT NAME" and e-mail address as well, or you can get this error http://stackoverflow.com/questions/18677244/error-invalid-client-no-application-name.
