

# fullserver

os

ubuntu bionic 18.04

hardware

have cpu ,gpu, ram, rom ,bios,cooler ,motherboard,etc.. have the essens

you need a lot off memory(tb)

## gpu in linux

gpu activation (One of the propositos of the computer is to train artificial intelligence or produce)

For which nesito the gpu working

It is hard to comprise the operation of this case

when i confugurate gpu ... desconfugurate all and gpu (fps 60)

when dont touch gpu work in 2000 fps and dont show gpu information (fps 2000)

```
sudo apt-get install mesa-utils
```

```
and run glxgears and see fps to thing of situation
```

this can help me for find

answer<https://askubuntu.com/questions/1187822/how-to-install-tensorflow-for-nvidia-gpu-rtx-2070-super-on-ubuntu-18-04>

## ssh

is for contect to server with ssh

```
youuser@192.168.0.0
```

with out display for connect From outside

## bitcoin node

i try with this <https://thebitcoin.pub/t/how-to-setup-a-bitcoin-lightning-network-in-4-steps/37687> and dont work

```
sudo add-apt-repository -y ppa:bitcoin/bitcoin
```

```
sudo apt-get update
```

```
sudo apt-get install -y bitcoind
```

how i try and work in the os

```
sudo apt-get install snap
```

```
sudo snap install bitcoin
```

or

```
sudo snap install bitcoin-core
```

(work with gui) bitcoin(work better in )

and run for start bitcoin

```
bitcoin.daemon
```

and wait for 19 H

## anydesk

## nas with nextcloud

<https://www.youtube.com/watch?v=pVW7EgV2IU0>

you can have internet problemes as by this rason i do not put the configuracion of network

install with snap

```
sudo snap install nextcloud
```

for setup user

```
nextcloud.manual-install <username> <password>
```

i have problems and run

```
sudo snap remove nextcloud  
sudo snap install nextcloud
```

soloved for me

add you domine

```
sudo nextcloud.occ config:system:set trusted_domains 1 --value=domine
```

```
=== nginx and flask ===
```

<https://www.digitalocean.com/community/tutorials/how-to-serve-flask-applications-with-uwsgi-and-nginx-on-ubuntu-18-04> for system

```
sudo apt update
sudo apt install python3-pip python3-dev build-essential libssl-dev libffi-dev python3-setuptools
```

for version of projects `sudo apt install python3-venv mkdir ~/myproject` for control version projects

```
python3.6 -m venv myprojectenv
source activate myprojectenv
<code>
install my esencial packages
<code>
sudo python3 -m pip install -U wheel tensorflow-gpu opencv-python torch
torchvision numpy django flask scikit-learn sklearn matplotlib pandas uwsgi
unicorn
```

set up postgres for projects with postgres

<https://www.digitalocean.com/community/tutorials/how-to-install-and-use-postgresql-on-ubuntu-18-04>

```
install sudo apt update sudo apt install postgresql postgresql-contrib create user createuser
-interactive sudo -u postgres createuser -interactive sudo -i -u <user> psql -d <data base> CREATE
TABLE table_name (column_name1 col_type (field_length) column_constraints,column_name2
col_type (field_length),column_name3 col_type (field_length));
```
